Gold Emperor Pro v1.1 — Quick Start Guide 🚀

Gold Emperor Pro is an advanced XAUUSD expert advisor designed for consistent performance and smart risk control. Below is a quick-start reference to get you trading fast.

📊 Risk Levels

- Very Low Risk— (Activates when your balance reaches $100 when Enabled)
- Low Risk — (Activates when your balance reaches $300 when Enabled)
- Medium-Low Risk — (Activates when your balance reaches $600 when Enabled)
- Medium Risk — (Activates when your balance reaches $1,000 when Enabled)
- High Risk — (Activates when your balance reaches $150,000 when Enabled)
- Very High Risk — (Activates when your balance reaches $200,000 when Enabled)
- Extreme Risk — (Activates when your balance reaches $250,000 when Enabled)

💲 Minimum Trading Balance

Recommended: $500+

⚖️ Lot Sizing

- Fixed Lot (default) — trades a constant lot size.
- Fixed Lot OFF — EA scales lot sizes automatically with account equity.

⚖️ Include Scalping

When enabled, the EA activates its Scalping Engine, allowing it to execute additional trades during periods of high market activity. This feature can significantly boost your profit potential.

For example, if the EA generated $10,000 between January 2025 and August 2025 in standard mode, enabling the Scalping Engine could have increased that figure to around $28,000.

⚠ Important: While Scalping Mode can amplify profits, it may also increase account drawdown. We strongly recommend running thorough backtests before enabling this feature on a live account. ✅ Most users prefer to disable Fixed Lot so the EA can manage position sizing and scale with account growth.
